PROJECT ABSTRACT SUBMISSION

COURSE: DATA SCIENCE PROJECT – 1(24AD3107)

A.Y. 2026 - 2027

TITLE OF THE PROJECT		Interactive EDA Dashboard	
S. No.	University ID	Name	
1	2420030007	K Sai Vignesh	
2	2420030268	A.Sai Shrawan	
3	2420030183	Shaik Aman	
Name of the Guide		Prathusha	

Abstract

The Interactive EDA Dashboard is a data analytics platform designed to simplify and automate the process of Exploratory Data Analysis (EDA) for users working with different types of datasets. The system allows users to upload a CSV file and automatically performs essential data analysis tasks such as data profiling, missing-value identification, statistical summarization, outlier detection, and relationship analysis between variables. It generates interactive visualizations including distribution plots, box plots, correlation heatmaps, and pairplots to help users understand patterns, trends, and anomalies within the dataset. The dashboard provides a user-friendly interface where users can explore the uploaded data without manually writing separate analysis code for every dataset. Using Python-based data analysis libraries and an interactive dashboard framework such as Streamlit or Dash, the system integrates data preprocessing, statistical analysis, visualization, and reporting into a single platform. The proposed system can be applied to datasets from different domains, making it flexible for students, researchers, analysts, and other users who need quick insights from raw data. By reducing repetitive EDA tasks and presenting analytical results in an organized visual form, the dashboard improves the efficiency of data exploration and supports better data-driven decision-making. The system can also serve as a foundation for further machine learning workflows by helping users understand and prepare datasets before model development.
